National Directory of State-Wise E-Waste Recovery and Management Facilities

A Regional Directory and Technical Assessment of Licensed Recyclers and Recovery Networks in India

---

1. Executive Summary: The E-Waste Challenge and Regulatory Outlook

India has emerged as one of the fastest-growing generators of electronic waste (e-waste) globally. Driven by rapid technological obsolescence, the rise of B2B digital infrastructure, and consumer electronics consumption, the country generates an estimated 2 to 3.2 million tonnes of e-waste annually. However, the regulatory and operational infrastructure required to capture this stream remains heavily bottlenecked. Nationally, only about 30% of generated e-waste reaches authorized formal recycling networks. The remaining 70% is absorbed by the unorganized, informal sector, where extraction of precious metals is conducted using open-air acid baths and crude thermal stripping, posing catastrophic risks to local ecosystems and public health.

In response, the Ministry of Environment, Forest, and Climate Change (MoEFCC) has aggressively updated the E-Waste (Management) Rules, mandating rigorous Extended Producer Responsibility (EPR) targets that scale up to 70% of historic sales. This regulatory shift has transformed e-waste management from an optional sustainability initiative into a strict corporate and legal compliance mandate. This directory provides a state-wise assessment of Central Pollution Control Board (CPCB) and State Pollution Control Board (SPCB) registered recyclers, with a focal assessment of West Bengal's developing real-time tracking network.

2. West Bengal Infrastructure: Audits and Registered Recovery Channels

The state of West Bengal presents a compelling study in e-waste operational dynamics. According to recent state-level dashboard metrics, West Bengal exhibits a high recycling efficiency of 83.6%, demonstrating that once waste enters the formal system, processing capability is highly robust. However, the state's overall achievement and its 'State Score' are capped at 56 and 56.0% respectively. This is primarily due to a massive bottleneck in upstream formal collection systems, which fails to capture the majority of generated waste.

This structural gap is further highlighted by the state's internal administrative scorecard, which registers a critical audit score of 10.5 out of 100. This score reflects zero-percent achievement in

formalizing the informal sector, establishing comprehensive state-wide baseline inventories, and enforcing regulatory compliance. At present, the state relies on a handful of large-scale industrial recyclers and pioneering private-public partnerships to bridge this gap. Below is the official roster of registered e-waste recyclers approved by the West Bengal Pollution Control Board (WBPCB).

Company Name	Facility Location	Permitted Capacity	Validity
M/s WB E-Waste Control Management Pvt. Ltd.	Vill: Maheshrekha – Kulgachia, Dist: Howrah, Pin 711306	19,992 MT / Annum	31/01/2028
M/s Hindusthan Recycling	Vill: City Madhuban, PO: Chakata, PS: Hura, Dist: Purulia	6,960 MT / Annum	31/05/2027
M/s P U Steel & Electro Process Pvt. Ltd.	Ruiya Industrial Complex, Patulia Khardaha, North 24 Parganas	1,200 MT / Annum	31/12/2028
M/s Lubrina Recycling (P) Ltd.	PS: Joychandipur, PS: Bishnupur, Dist: 24 Parganas (South)	1,080 MT / Annum	31/10/2029
M/s J. S. Pigments Pvt. Ltd.	Vill. & PO: Jarua, PS: Polba, Dist: Hooghly, Pin: 712138	600 MT / Annum	30/04/2028
M/s Bhanu Metal Industries	Vill: Khamar, PO: Rajarhat, PS: Rajarhat, Dist: 24 Parganas (North)	600 MT / Annum	01/12/2026
M/s Eco Age Recycling	Dag No. 263, Mouza- Sonepur, PS: Kashipur, Dist: 24 Parganas (South)	180.45 MT / Annum	31/03/2029

Corporate Profile & Case Study: Hulladek Recycling Pvt. Ltd.

Founded in 2014 by Nandan Mall in Kolkata, Hulladek Recycling Pvt. Ltd. represents the first structured and organized e-waste management initiative in Eastern India. Initially bootstrapped with earnings from Mall's college days and modeled after industrial recovery systems observed in Spain, the enterprise has grown to manage more than 25,000 tonnes of e-waste across India since its inception. In 2023 alone, Hulladek successfully channelized 2,050 tonnes of electronic waste to formal recycling systems. To address the state's collection gap, Hulladek has established a decentralized reverse logistics network of collection centers across West Bengal's major urban centers, including Kolkata (Tollygunge/Lake Town/Salt Lake), Durgapur, Asansol, Kharagpur, Bardhaman, Balurghat, and Berhampore (Murshidabad).

3. State-Wise National Directory: Leading E-Waste Recovery Companies

Across India, state governments have adopted varying models to handle e-waste. States with extensive IT and industrial corridors, such as Karnataka, Maharashtra, Tamil Nadu, and Uttar Pradesh, have pioneered specialized e-waste processing zones and high-tech recovery facilities. Many of these operators possess proprietary technology to process complex fractions, such as multi-layered printed circuit boards (PCBs) and lithium-ion battery cells, which are typically shipped inter-state for specialized recovery. The table below outlines leading, government-authorized companies working across key Indian states.

State	Company Name	Primary Focus & Technology	Key Strength / Capacity
Uttar Pradesh	Attero Recycling Pvt. Ltd. (Noida)	Patented PCB copper extraction, precious metal refining, Li-ion battery recovery	CPCB-approved nationwide logistics; industrial metal extraction
Delhi NCR	Karo Sambhav Pvt. Ltd.	Technology-driven Producer Responsibility Organisation (PRO) compliance	India's leading circular economy platform; extensive retail take-back programs
Karnataka	E-Parisaraa Pvt. Ltd. (Bengaluru)	Scientific dismantling, component refurbishment, metal extraction	India's first eco-friendly e-waste plant (established 2005)
Karnataka	Cerebra Integrated Tech (Bengaluru)	End-to-end IT Asset Disposition (ITAD) & large-scale recycling	High-capacity B2B asset tracking and security-compliant dismantling
Maharashtra	Eco Recycling Ltd. (Ecoreco) (Mumbai)	Urban mining, corporate data destruction, formal recycling	First publicly listed e-waste recycler; large corporate client base
Maharashtra	Sanjari Recycling (Mumbai/Pune)	Zero-waste B2B e-waste reverse logistics and sorting	Certified by MPCB; large integrated collection network
Maharashtra	GreenZon Recycling Pvt. Ltd. (Pune)	B2B electronic waste collection and OEM take-back programs	Pollution Board approved; direct partnerships with major IT parks
Tamil Nadu	M/s Ascent Urban Recyclers Pvt. Ltd.	Industrial sorting, copper recovery, plastic pelletization	Authorized capacity of 30,000 MT / Annum

Andhra Pradesh	Veera Waste Management Systems	Dismantling, sorting, and raw fraction preprocessing	Authorized capacity of 5,820 MT / Annum (Visakhapatnam)
Andhra Pradesh	Green Waves Environmental Solution	Local B2B electronics salvage and recycling education	Authorized capacity of 480 MT / Annum

4. Industry Gaps and Strategic Policy Recommendations

A critical analysis of the state-wise data highlights three major operational gaps in India's formal e-waste sector:

- **The Collection Deficit vs. Installed Capacity:** While large states have permitted massive annual capacities (such as 30,000 MT in Tamil Nadu and nearly 20,000 MT in West Bengal), actual capacity utilization remains low. Recyclers struggle to compete with the informal sector, which pays immediate cash to households and small businesses without compliance overhead.
- **Technological Disparity in Fraction Processing:** Most SPCBs license 'dismantlers' rather than 'recyclers'. Advanced metal extraction and chemical processing of PCBs are concentrated in a few highly capitalized facilities (like Attero in UP or E-Parisaraa in Karnataka), requiring cross-border shipping which introduces carbon footprints and logistics friction.
- **Informal Sector Integration (0% Scorecard Gap):** As demonstrated in West Bengal's scorecard, the formal system has failed to integrate informal waste dealers (kabadiwalas). Formalizing these dealers as collection agents under EPR networks would immediately solve the upstream volume bottleneck.

To bridge these gaps, policymakers must enforce strict EPR compliance on bulk consumers, establish subsidized municipal collection kiosks in collaboration with PROs like Karo Sambhav, and provide localized tax incentives for registered recyclers.
